A submarine (or simply sub) is a watercraft capable of independent operation underwater. It differs from a submersible, which has more limited underwater capability. The term most commonly refers to a large, crewed vessel. It is also sometimes used historically or colloquially to refer to remotely operated vehicles and robots, as well as medium-sized or smaller vessels, such as the midget ...

A submarine is a specialized watercraft that can operate underwater at very high pressures beyond the range of unaided human survivability. Submarines, first widely used in World War I, are used by all major navies today, especially the American, Russian and British navies. Civilian submarines and submersibles are used for marine and freshwater science and for work at depths too great for human ...

May 4/15: Canada is planning a major mid-life extension program for its fleet of Victoria-class subs. Various options are being considered, with a report expected by June. The project is expected to be worth between \$1.2 and \$2.5 billion, with the aim of extending the boats' life by six to eighteen years.
